Guided tutorials are a great way to start. Set type filters to Quick Start to watch tutorials that offer you the basics of sketching, part modeling, creating assemblies and documenting your design in drawing. You can access the tutorial by clicking on the Tutorial Gallery in the My Home panel on the Get Start tab, ribbon. Note: Guided tutorials are not available in inventor LT. Once you've finished the basics, set the place filter for all available ones, and type all filter to see tutorials that cover additional learning materials, such as sheet metal design. Note: An active Internet connection is required to view all available. You can change the gallery display by clicking on any of the following: you can download to watch all available tutorials. Note: Gallery display update is updated when a new tutorial is shared publicly with the community. Change the language filter to watch tutorials available in other languages. You can select more than one language. The tutorials you previously downloaded are displayed in this view marked with banners installed. Installed only to watch locally installed tutorials. My tutorial to watch the tutorials you've created. Shared with me to watch tutorials shared with you privately. To make a tutorial, click Create Tutorial in the Gallery pane. You can share tutorials publicly or privately when you finish. When you are designed you will usually always start with a 2D sketch. So create 2D sketch to start with creating a sketch click. You will see like the matrix of each plane (X, Y, Z). I use the Y, X plane, so click on the top-left corner. We are now in sketch view. You don't always need to start sketching like this, however, if you already have a 3D object you can start a 2D sketch in favor of it! We'll start on the left side of the tool bar and work your way right. So now to start with a line. It's really easy, you select LINE and you can click on any part of the screen. You have the option to choose the distance and angle when you click. Line distance and angle box press to switch between tabs. You can continue to create a square when you've created a line, you don't have to select the line option to create the line every time. If you want to create a size then the line will still be selected and you everywhere unless you right-click and press OK, cancel or if you connect the line to a point. In the picture above I made a box. Now on circles. Right next to the line selection is a circle selection box. You may be Two types of circles from the center or tangent, for the tangent you select the rows you want the circle to be tangent. I used tangent circle and selected the top, bottom and right sides of our box.
